Ohio Unintentional Drug Overdose Report

2023 Ohio Unintentional Drug Overdose Report

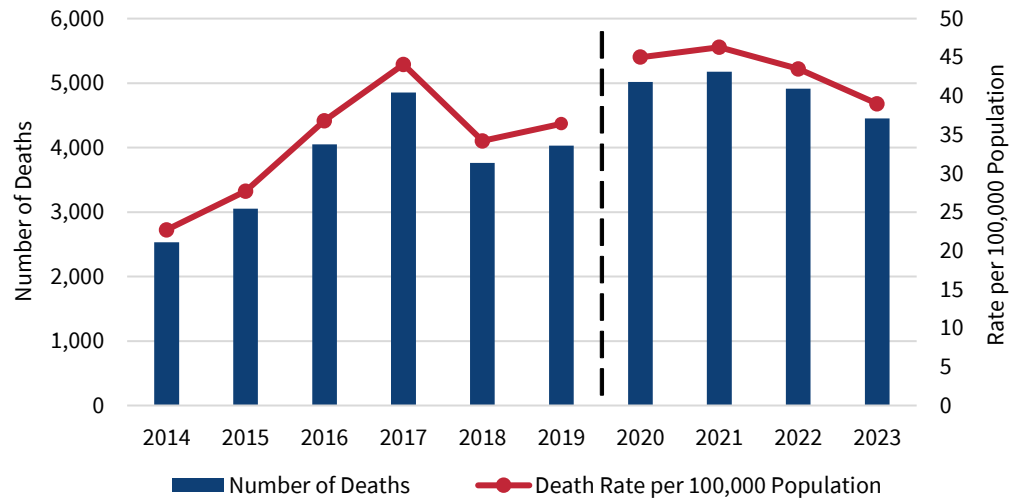

Unintentional Drug Overdose Deaths in Ohio

- In 2023, there were 4,452 unintentional drug overdose deaths. This was a 9% decrease in the number of deaths from 2022 and the second consecutive year for decreases in Ohio unintentional drug overdose deaths. From 2021 to 2022, there was a 5% decrease in the number of unintentional drug overdose deaths.

FAST FACTS

- From 2022 to 2023, there was a 9% decrease in the number of Ohio unintentional drug overdose deaths, compared with a national decrease of 2%.^{*} In 2023, 4,452 Ohioans died from unintentional drug overdoses.
- In 2023, illicit fentanyl or fentanyl analogs were involved in 78% of unintentional drug overdose deaths in Ohio, often in combination with other drugs.
- From 2022 to 2023, unintentional drug overdose deaths involving opioid drug categories decreased, with natural and semi-synthetic opioids (e.g., oxycodone) having the largest decrease (-20%).
- From 2022 to 2023, unintentional drug overdose deaths involving the non-opioid drug categories of cocaine and benzodiazepines increased 7% and 4%, respectively.
- Psychostimulant-related deaths (e.g., methamphetamine) decreased 6% from 2022 to 2023. This was the first decrease in Ohio psychostimulant-related deaths for the years presented.

Figure 1. Number and Age-Adjusted Rate of Unintentional Drug Overdose Deaths by Year, Ohio, 2014-2023*

- In 2023, Ohio's age-adjusted rate of 39 deaths per 100,000 population also marked a decrease from the age-adjusted rate of 43.5 deaths per 100,000 population seen in 2022. Age-adjusted rate of deaths per population is a conventional statistical adjustment done in accordance with CDC standards to account for the difference in expected death rates among different age ranges.

Figure 2. Number of Unintentional Drug Overdose Deaths by Quarter, Ohio, 2021-2023

- In 2023, while the first two quarters remained relatively steady, there was a 24% decrease in the number of deaths from the second quarter (1,215 deaths) to the fourth quarter (927 deaths).

*Source: National Center for Health Statistics, Provisional Multiple Cause of Death Data on CDC WONDER <https://wonder.cdc.gov/mcd.html> (Accessed Oct. 23, 2024)

*At the time of this report, population files from the federal government reflecting new national standards and methodologies were available for 2020 through 2023 only. Because of this change, the Ohio Department of Health (ODH) advises caution in comparing these rates to those from years prior to 2020, as indicated by the segmented line in the graphic.

Source: ODH Bureau of Vital Statistics. Analysis: ODH Violence and Injury Epidemiology and Surveillance Section (VIESS). Includes Ohio residents who died due to unintentional drug poisoning (underlying cause of death International Classification of Diseases, Tenth Revision [ICD-10], codes X40-X44).

Drug Involvement

- From 2022 to 2023, there were increases in the number of unintentional drug overdose deaths involving the non-opioid drug categories of cocaine and benzodiazepines. The number of drug overdose deaths involving cocaine increased 7%, and deaths involving benzodiazepines increased 4%.
- In contrast, overall opioid-related unintentional drug overdose deaths decreased 11% from 2022 to 2023. Fentanyl-related deaths decreased 12%, while deaths involving natural and semi-synthetic opioids (e.g., oxycodone) and heroin decreased 20% and 17%, respectively.
- Psychostimulant-related deaths (e.g., methamphetamine) decreased 6% from 2022 to 2023. This was the first decrease in Ohio psychostimulant-related deaths for the years presented.

Figure 3. Number of Unintentional Drug Overdose Deaths Involving Select Drugs, Ohio, 2014-2023

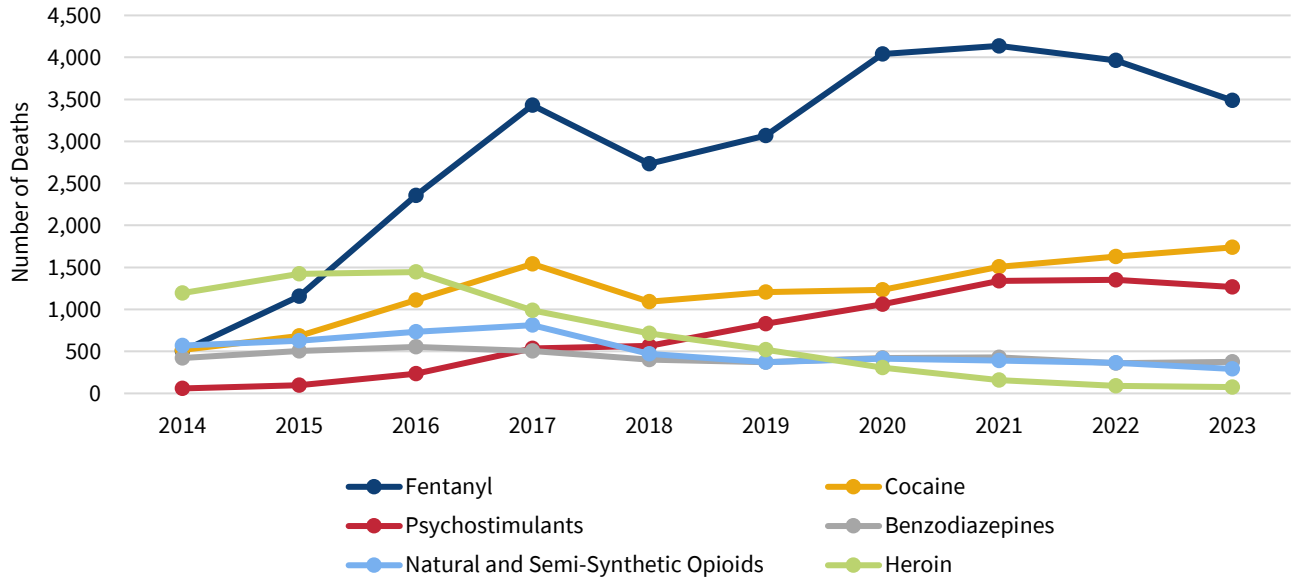

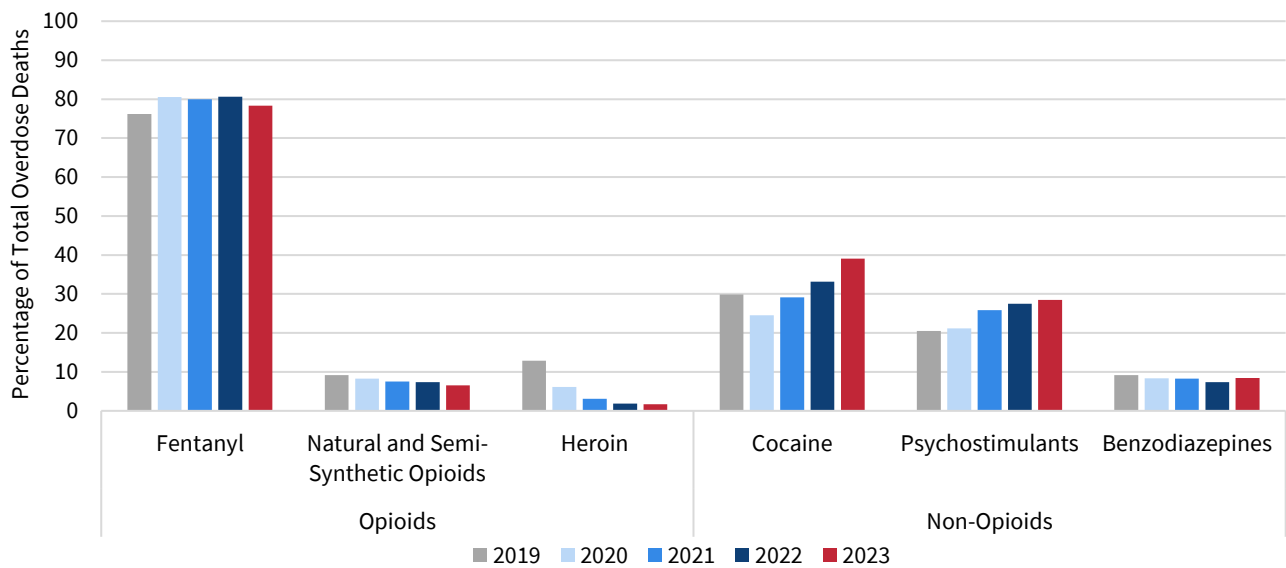

Figure 4. Percentage of Unintentional Drug Overdose Deaths Involving Select Drugs, Ohio, 2019-2023

- Fentanyl was involved in the majority of unintentional drug overdose deaths in 2023 (78%), a decrease from the previous three years, which ranged from 80-81%.
- Cocaine had the largest increase in the percentage of related overdose deaths from 2022 to 2023. Unintentional drug overdose deaths involving cocaine increased from 33% in 2022 to 39% in 2023.

Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanyl). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to ICD-10 code T40.2. Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category.

Drug Involvement

- Fentanyl and fentanyl analogs were involved in 3,486 unintentional drug overdose deaths in 2023, which represented 78% of total unintentional drug overdose deaths and 95% of total opioid-related overdose deaths. The fentanyl analog carfentanil contributed to less than 1% of deaths involving fentanyl.

Figure 5. Number and Percentage of Fentanyl-Related Unintentional Drug Overdose Deaths, Ohio, 2019-2023

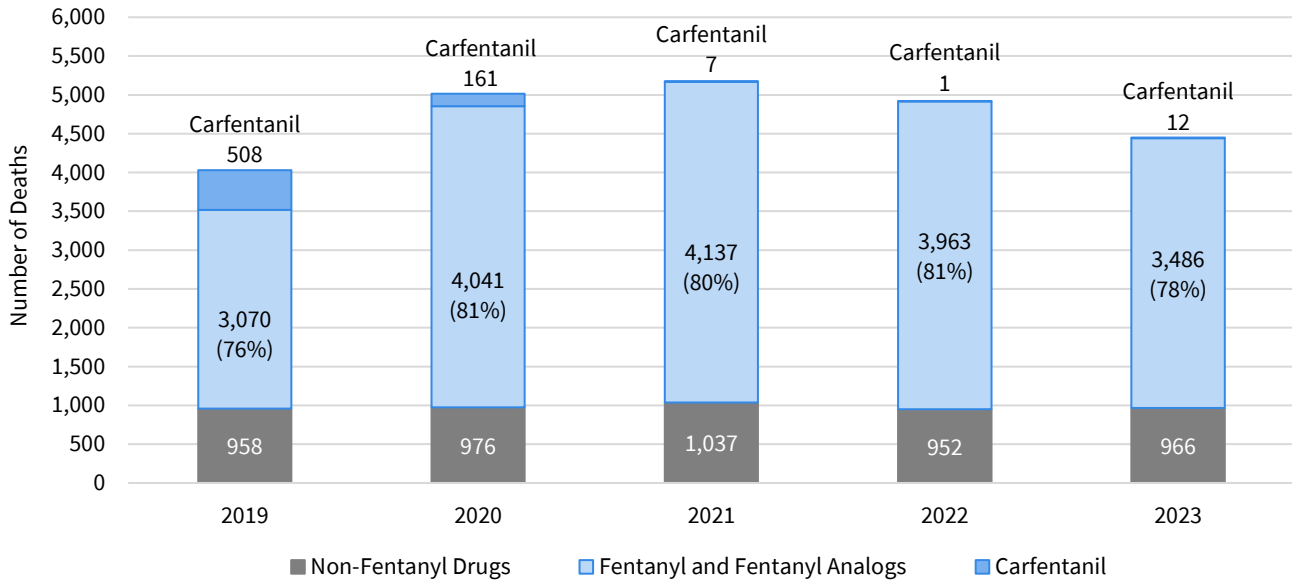

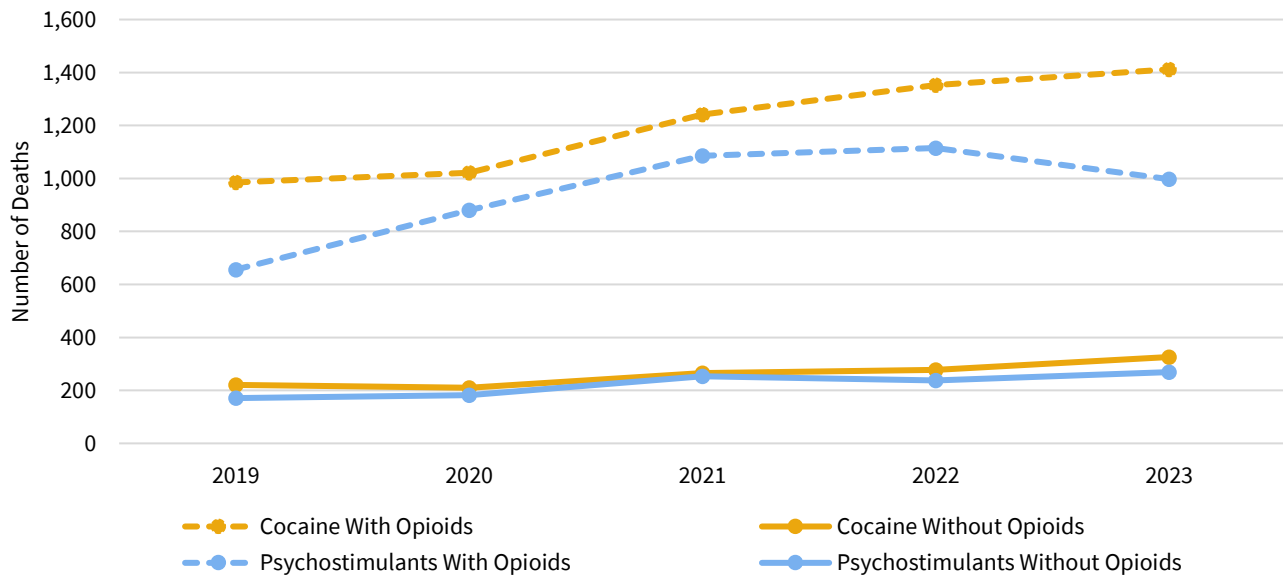

Figure 6. Number of Unintentional Drug Overdose Deaths Involving Select Drug Combinations, Ohio, 2019-2023

- From 2022 to 2023:
 - The total number of unintentional drug overdose deaths involving cocaine increased 7%. The number of cocaine-related deaths that also involved an opioid increased 4%, while those that did not involve an opioid increased 18%.
 - The total number of unintentional drug overdose deaths involving psychostimulants decreased 6%. The number of psychostimulant-related deaths that also involved an opioid decreased 10%, while those that did not involve an opioid increased 14%.

Drug Involvement

Table 1. Number and Percentage of Unintentional Drug Overdose Deaths Involving Select Drugs, Ohio, 2014-2023

Drug Category	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Percentage of 2023 Unintentional Drug Overdose Deaths
Opioids											
Any Opioid	2,020	2,590	3,495	4,162	3,150	3,372	4,308	4,369	4,138	3,664	82%

Non-Opioids											
Cocaine	517	685	1,109	1,540	1,092	1,206	1,231	1,506	1,629	1,738	39%
Psychostimulants ³	59	96	233	537	564	827	1,062	1,338	1,352	1,267	28%
Benzodiazepines	420	504	553	506	403	371	420	428	360	375	8%
Hallucinogens	49	61	100	108	60	108	119	102	119	83	2%
Barbiturates	6	19	14	18	12	10	15	12	18	11	<1%
Alcohol⁴											
Alcohol ⁴	383	380	539	580	442	579	658	702	690	585	13%
Other/Unspecified Drugs Only⁵											
Other/Unspecified Drugs Only ⁵	274	194	182	180	171	169	213	213	184	132	3%
Multiple Drug Involvement⁶											
Multiple Drug Involvement ⁶	1,321	1,747	2,451	2,957	2,266	2,484	2,922	3,174	3,132	3,059	69%
Total Unintentional Drug Overdose Deaths	2,531	3,050	4,050	4,854	3,764	4,028	5,017	5,174	4,915	4,452	

Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category.

1. Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanil).

2. Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to ICD-10 code T40.2.

3. Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6).

4. Alcohol was present along with other drugs. Alcohol is considered a non-drug poisoning in ICD-10 coded mortality data (ICD-10 codes T51.1-T51.9) and is not included in total unintentional drug overdose deaths.

5. Other/unspecified drugs includes those instances where only ICD-10 code T50.9 (other/unspecified) is listed as the drug contributing to death.

6. Multiple drug involvement is calculated from the number of multiple cause of death codes used to identify specific drug types (T36.0-T50.8, T51.1-T51.9).

Drug Involvement: Fentanyl Combinations

- Illicit fentanyl or fentanyl analogs were involved in 78% of 2023 unintentional drug overdose deaths, often in combination with other drugs.
- The percentage of fentanyl involvement with other substances varies by drug category.
 - Of all deaths related to:
 - Cocaine, 79% also involved fentanyl.
 - Psychostimulants (e.g., methamphetamine), 77% also involved fentanyl.
 - Benzodiazepines, 73% also involved fentanyl.
 - Natural and semi-synthetic opioids (e.g., oxycodone), 61% also involved fentanyl.
 - Heroin, 93% also involved fentanyl.

Figure 7. Percentage of Unintentional Drug Overdose Deaths Involving Fentanyl by Drug Category, Ohio, 2019-2023

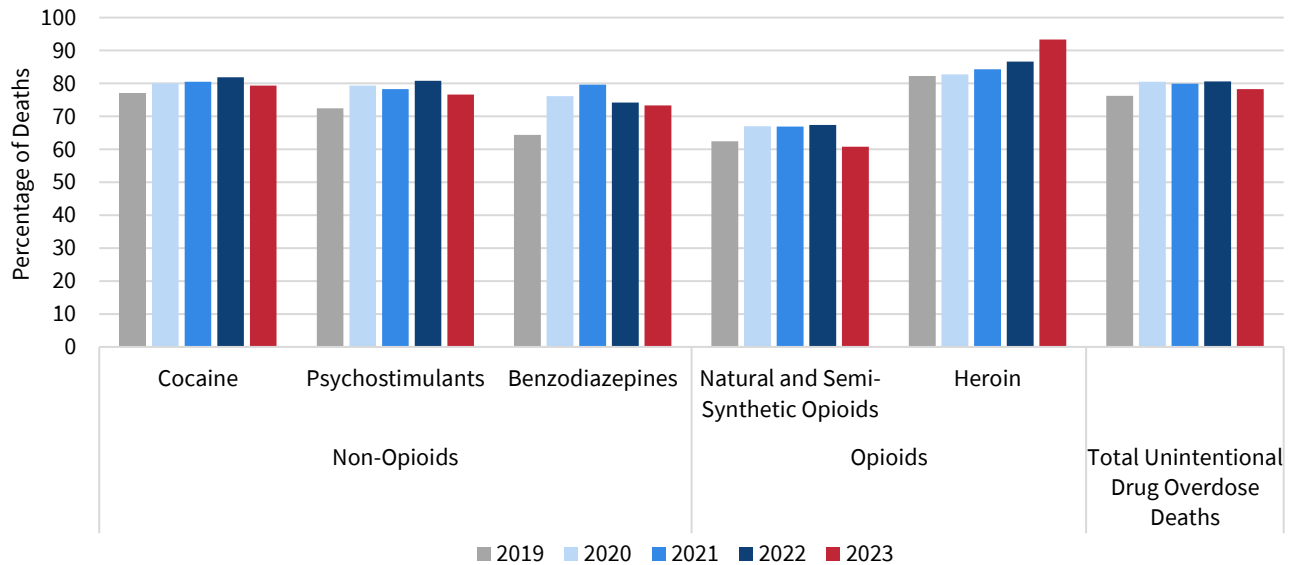

Table 2. Number and Percentage of Unintentional Drug Overdose Deaths Involving Select Drug Combinations, Ohio, 2014-2023

Drug Category	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Percentage of 2023 Unintentional Drug Overdose Deaths
Fentanyl	503	1,155	2,357	3,431	2,733	3,070	4,041	4,137	3,963	3,486	78%
Fentanyl + Cocaine	101	239	619	1,072	808	930	985	1,213	1,334	1,379	31%
Fentanyl + Psychostimulants	12	34	117	368	379	599	843	1,047	1,092	971	22%
Fentanyl + Benzodiazepines	81	159	273	318	255	239	320	341	267	275	6%
Fentanyl + Natural and Semi-Synthetic Opioids	79	170	367	477	260	231	278	261	244	177	4%
Fentanyl + Heroin	170	490	750	720	569	428	255	134	78	70	2%
Total Unintentional Drug Overdose Deaths	2,531	3,050	4,050	4,854	3,764	4,028	5,017	5,174	4,915	4,452	

Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanil). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to code T40.2. Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category.

Demographics: Sex and Race/Ethnicity

- Males have consistently higher rates of fatal drug overdose compared with females. From 2022 to 2023, the unintentional drug overdose death rate for females decreased 14% compared with a decrease of 8% for males.

Figure 8. Age-Adjusted Rate of Unintentional Drug Overdose Deaths by Sex, Ohio, 2020-2023

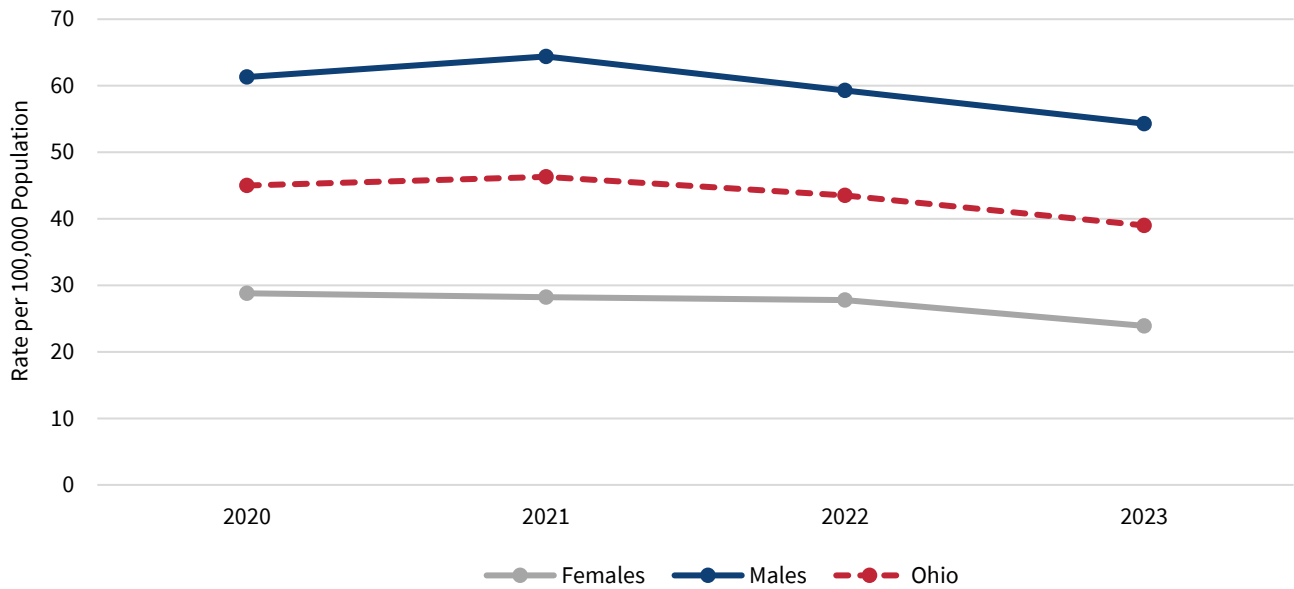

Figure 9. Age-Adjusted Rate of Unintentional Drug Overdose Deaths by Race/Ethnicity, Ohio, 2020-2023

- In 2023, the Black non-Hispanic population continued to have the highest rate of unintentional drug overdose deaths.
- From 2022 to 2023, the death rate among the Black non-Hispanic population decreased 4% to 64.9 deaths per 100,000 population compared with a 12% decrease among the White non-Hispanic population (37.6 deaths per 100,000 population).
- While the Hispanic population continued to have the lowest rate of unintentional drug overdose deaths among the groups presented, the rate increased 8% from 2022 to 2023 to 33.6 deaths per 100,000 population.

Demographics: Sex and Race/Ethnicity

- In 2023, Black non-Hispanic males continued to have the highest rate of unintentional drug overdose deaths compared with other sex and race/ethnicity groups. At 100.3 deaths per 100,000 population, the overdose death rate for Black non-Hispanic males was nearly twice that of White non-Hispanic males (50.8 deaths per 100,000 population). From 2022 to 2023, the overdose death rate for Black non-Hispanic males decreased 2% compared with a 10% decrease for White non-Hispanic males.
- In 2023, Black non-Hispanic females continued to have higher rates of unintentional drug overdose deaths compared with White non-Hispanic females. From 2022 to 2023, the overdose death rate for Black non-Hispanic females decreased 9% to 33.1 deaths per 100,000 population, while the rate for White non-Hispanic females decreased 16% to 24.2 deaths per 100,000 population.
- While Hispanic females and males had lower rates of unintentional drug overdose deaths compared with other sex and race/ethnicity groups, rates for both groups increased from 2022 to 2023 (13% and 6%, respectively).

Figure 10. Age-Adjusted Rate of Unintentional Drug Overdose Deaths by Sex and Race/Ethnicity, Ohio, 2020-2023

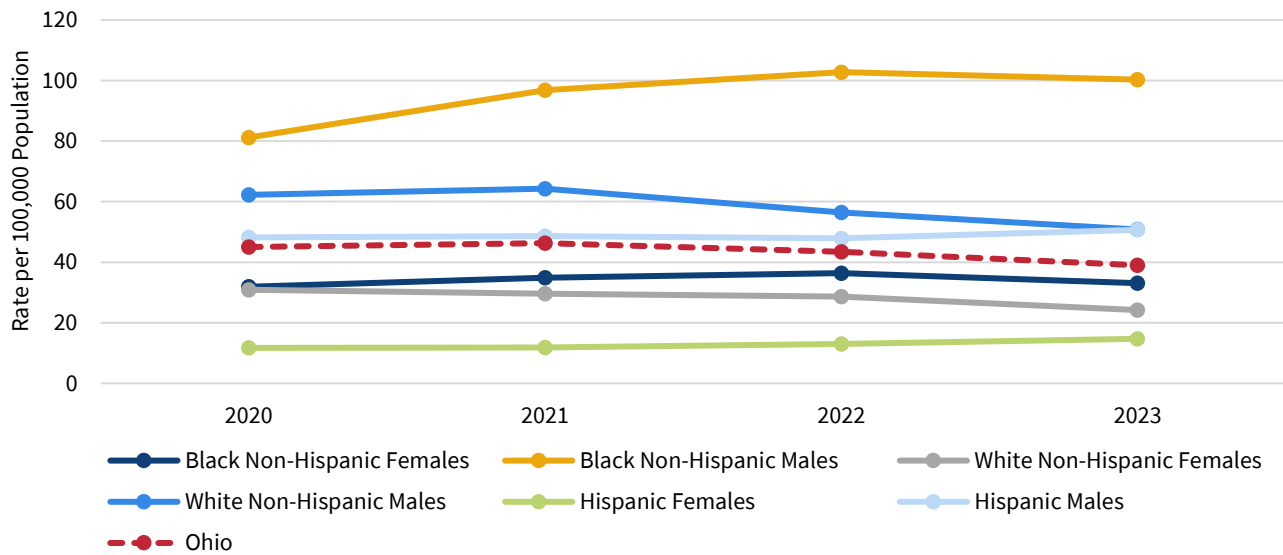

Figure 11. Number of Unintentional Drug Overdose Deaths Among the Black Non-Hispanic Population by Quarter, Ohio, 2022-2023

Figure 12. Number of Unintentional Drug Overdose Deaths Among the White Non-Hispanic Population by Quarter, Ohio, 2022-2023

- From the first quarter to the final quarter of 2023, the number of unintentional drug overdose deaths decreased for both Black and White non-Hispanic females and males.

Demographics: Sex and Race/Ethnicity

- Among Black non-Hispanic females and males, the 55-64 age group had the highest overdose death rate followed by the 45-54 age group for females and the 35-44 age group for males.
- Among White non-Hispanic females and males, the 35-44 age group had the highest overdose death rate followed by the 45-54 age group.

Figure 13. Rate of Unintentional Drug Overdose Deaths by Age, Sex, and Race/Ethnicity, Ohio, 2023

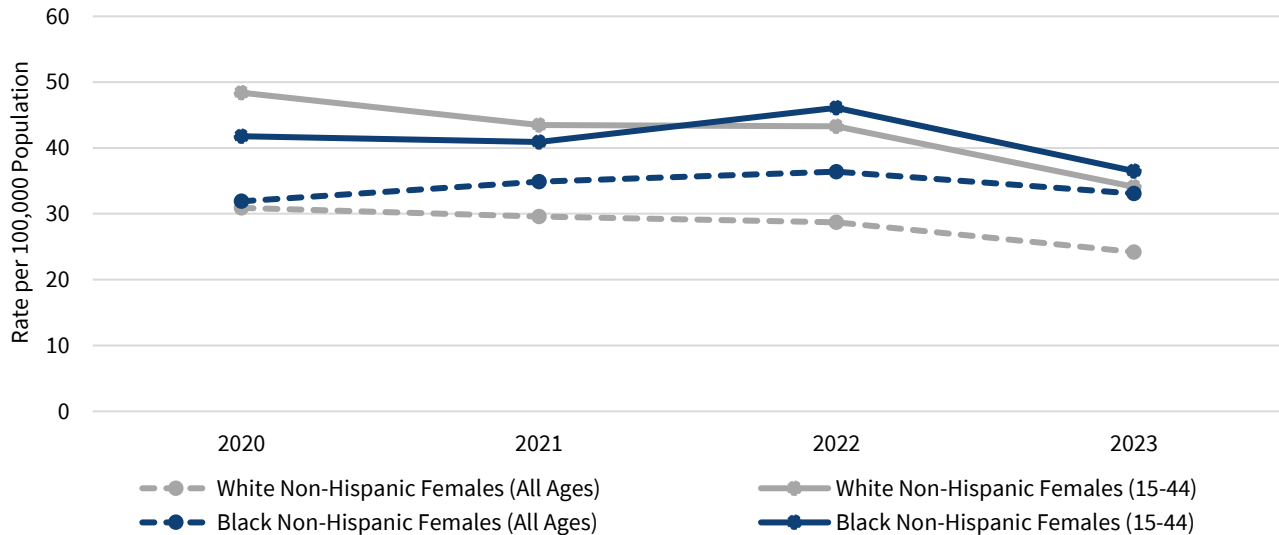

Figure 14. Rate¹ of Unintentional Drug Overdose Deaths Among Females by Age and Race/Ethnicity, Ohio, 2020-2023*

- From 2022 to 2023, the overdose death rate for females of all ages decreased 14%, and the overdose death rate for females of reproductive age (15-44) decreased 21%.
- For females of all ages, the overdose death rates among Black non-Hispanic females decreased 9%, while the rate among White non-Hispanic females decreased 16%.
- For females of reproductive age (15-44), the overdose death rate among both Black non-Hispanic females and White non-Hispanic females decreased 21%.

***Substance use disorder among females of reproductive age is of particular concern because fetal exposure to opioids and other substances during pregnancy can result in infants born with neonatal abstinence syndrome (NAS), a set of symptoms associated with abrupt withdrawal.**

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers.

1. Death rates presented for females of reproductive age (ages 15-44) are age-specific; death rates presented for total females are age-adjusted.

Drug Involvement by Sex and Race/Ethnicity

- In 2023, illicit fentanyl was involved in the majority of unintentional drug overdose deaths among all the sex and race/ethnicity groups presented, ranging from 74% to 88% of deaths.
- The highest percentage of deaths involving cocaine was among Black non-Hispanic females and males.
- The highest percentage of deaths involving psychostimulants (e.g., methamphetamine) was among White non-Hispanic females and males.

Figure 15. Percentage of Unintentional Drug Overdose Deaths Involving Select Drugs by Sex and Race/Ethnicity, Ohio, 2023

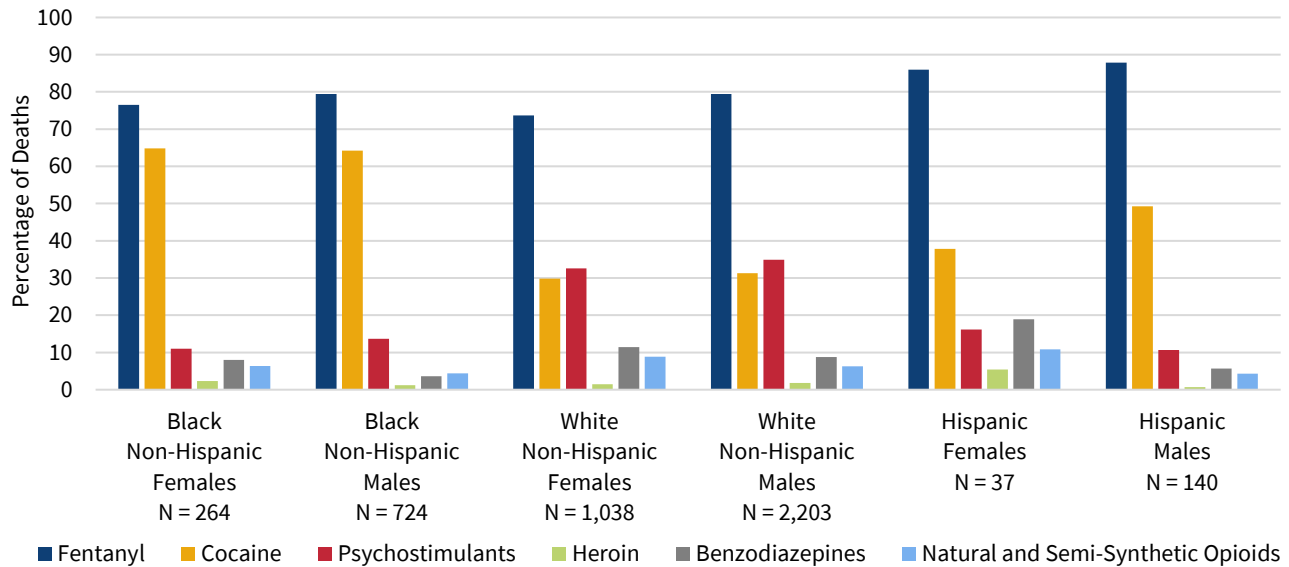

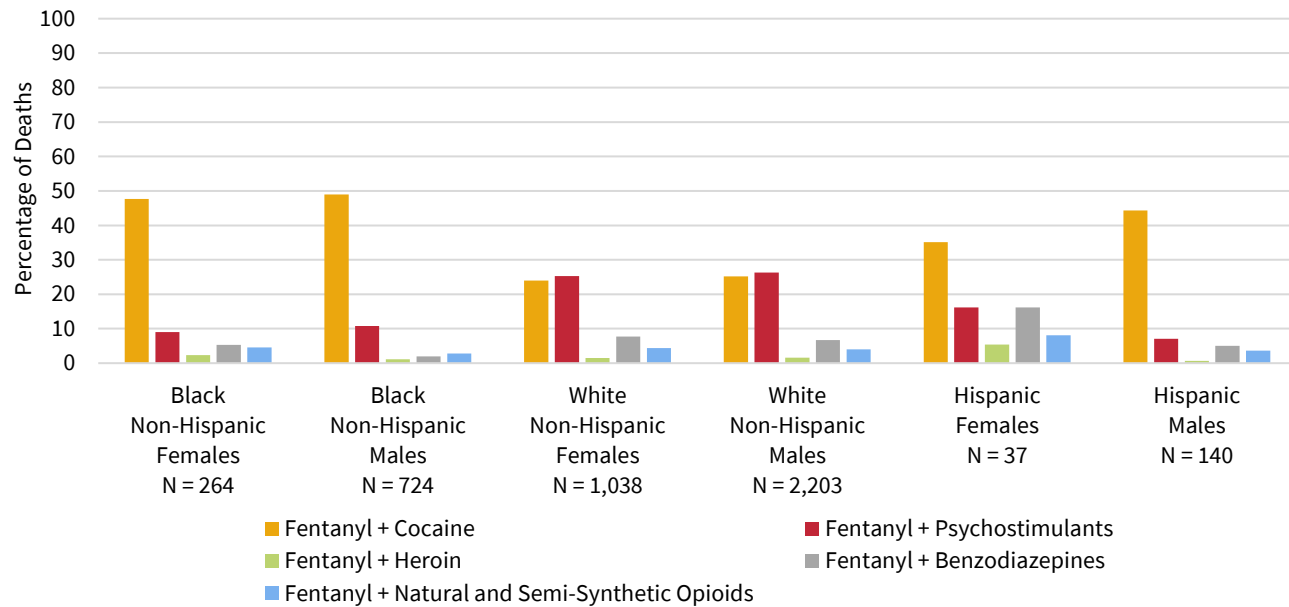

Figure 16. Percentage of Unintentional Drug Overdose Deaths Involving Fentanyl Combinations by Sex and Race/Ethnicity, Ohio, 2023

- In deaths involving a combination of fentanyl and other drug categories, the combination of fentanyl and cocaine was involved in the highest percentage of deaths among Black non-Hispanic females and males and Hispanic females and males.
- The percentage of deaths involving a combination of fentanyl and psychostimulants was highest among White non-Hispanic females and males.

Drug Involvement by Sex and Race/Ethnicity: Fentanyl, Cocaine, and Psychostimulant Trends

Figure 17. Number of Unintentional Drug Overdose Deaths Involving Fentanyl, Cocaine, and Psychostimulants by Sex and Race/Ethnicity, Ohio, 2019-2023

● Black Non-Hispanic Females
 ● Black Non-Hispanic Males
 ● White Non-Hispanic Females
 ● White Non-Hispanic Males

Fentanyl:

- From 2022 to 2023, all sex and race/ethnicity groups experienced decreases in the number of fentanyl-related deaths.
- Fentanyl-related deaths among Black non-Hispanic females and males decreased 15% and 5%, respectively. Among White non-Hispanic females and males, fentanyl-related deaths decreased 18% and 12%, respectively.

Figure 17a. Fentanyl

Cocaine:

- From 2022 to 2023, both Black non-Hispanic and White non-Hispanic males experienced increases in the number of cocaine-related deaths (8% and 12%, respectively).
- From 2022 to 2023, the number of cocaine-related deaths among Black non-Hispanic females remained the same, while deaths among White non-Hispanic females decreased 2%.

Figure 17b. Cocaine

Psychostimulants:

- In 2023, while the largest number of psychostimulant-related deaths was among White non-Hispanic females and males, the largest increase from 2022 to 2023 was among Black non-Hispanic males (6%).
- From 2022 to 2023, psychostimulant-related deaths among White non-Hispanic females and males decreased 14% and 6%, respectively.
- The number of psychostimulant-related deaths among Black non-Hispanic females remained the same during this period.

Figure 17c. Psychostimulants (e.g., methamphetamine)

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers. Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanil). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category.

2022-2023 Drug Involvement Summary: Sex and Race/Ethnicity

Table 3. Number of Unintentional Drug Overdose Deaths Involving Select Drugs by Sex and Race/Ethnicity, Ohio, 2022-2023

	Opioids						Non-Opioids					
	Fentanyl		Natural and Semi-Synthetic Opioids		Heroin		Cocaine		Psychostimulants		Benzodiazepines

Ohio Total*	244	177	78	70	1,334	1,379	1,092	971	267	275

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers. Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanyl). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to ICD-10 code T40.2. Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category.

*Total includes all unintentional drug overdose deaths among Ohio residents.

Demographics: Age

- In 2023, the 35-44 age group had the highest rate of unintentional drug overdose deaths (85.8 deaths per 100,000 population).
- From 2022 to 2023, unintentional drug overdose death rates increased among Ohioans ages 55 and older. Death rates among the 55-64 age group and the 65+ age group increased 3% and 4%, respectively.
- Death rates among Ohioans under the age of 55 decreased during the same period, with the largest decrease among the 15-24 age group (-31%).

Figure 18. Rate¹ of Unintentional Drug Overdose Deaths by Age, Ohio, 2020-2023

Figure 19. Rate of Unintentional Drug Overdose Deaths by Age and Sex, Ohio, 2023

- Compared with Ohio overall, females and males followed similar patterns in rates of unintentional drug overdose by age group in 2023. Among both females and males, the 35-44 age group had the highest unintentional drug overdose death rate in 2023 (53.3 and 118.2 deaths per 100,000 population, respectively).

Other age groups are not presented due to small numbers.

1. Rates presented for age groups are age-specific. Overall Ohio rates are age-adjusted to the 2000 U.S. standard population to allow a comparison of the overall risk of dying between different populations.

Drug Involvement by Age

- In 2023, illicit fentanyl was involved in the majority of unintentional drug overdose deaths among all age groups; however, the percentage of deaths involving fentanyl tended to decrease as age increased. Fentanyl involvement was highest among the 15-24 and 25-34 age groups (both 87%) and lowest among those aged 65 and older (53%).
- In contrast to fentanyl, cocaine involvement tended to increase with age. In 2023, the highest percentage of deaths involving cocaine was among those aged 55-64 (50%).

Figure 20. Percentage of Unintentional Drug Overdose Deaths Involving Select Drugs by Age, Ohio, 2023

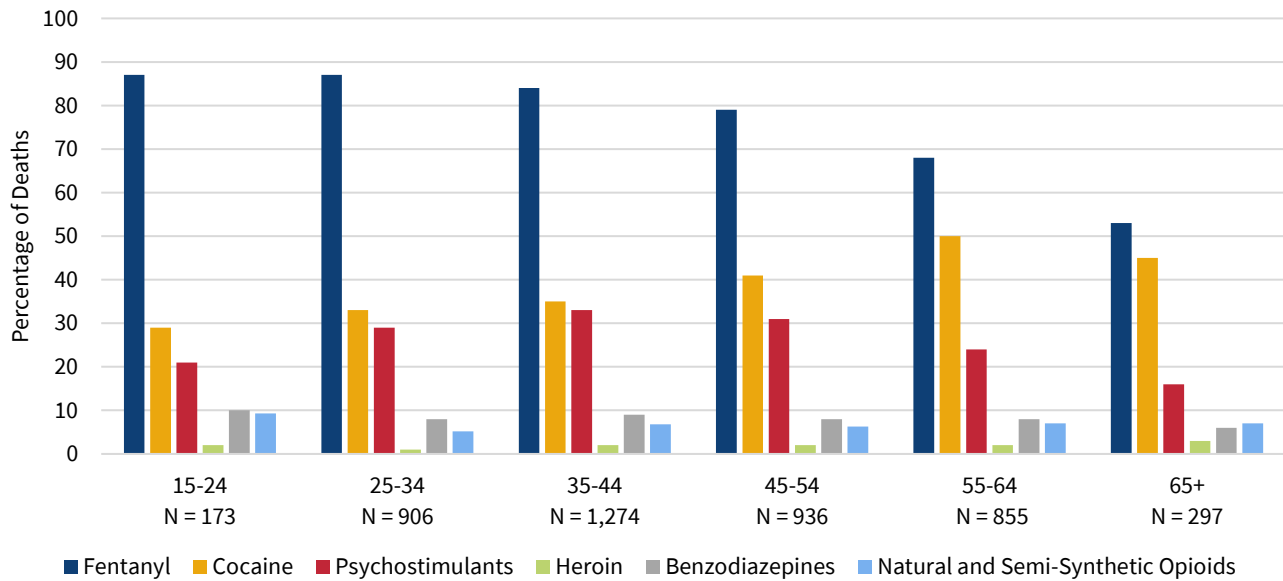

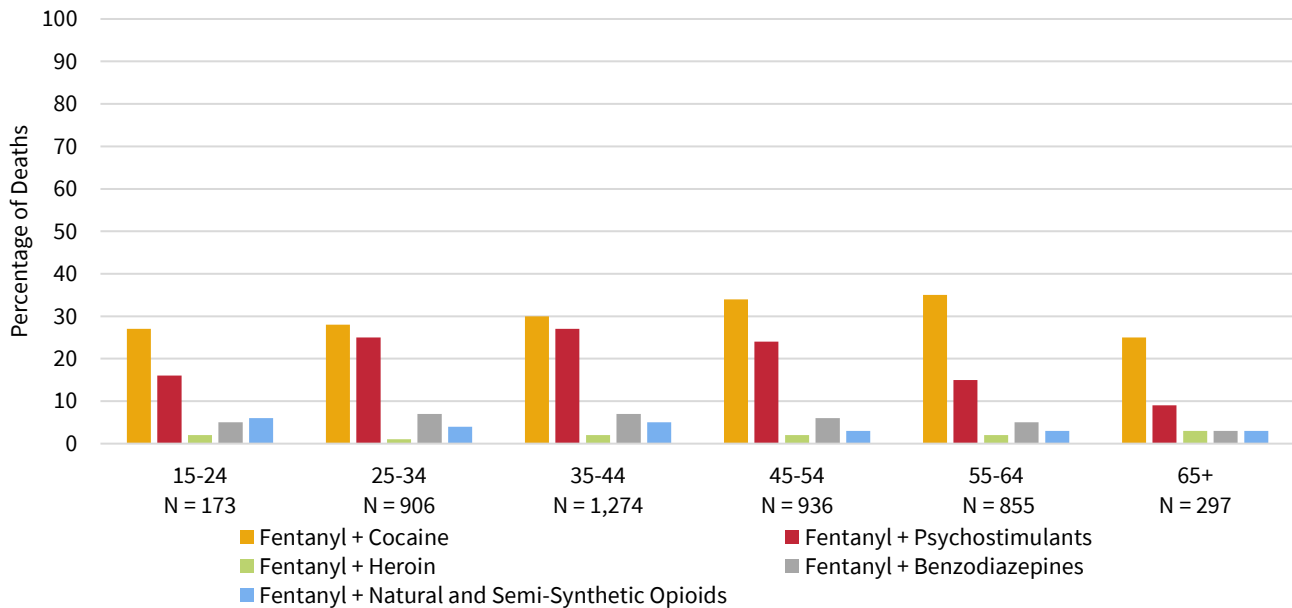

Figure 21. Percentage of Unintentional Drug Overdose Deaths Involving Fentanyl Combinations by Age, Ohio, 2023

- In deaths involving a combination of fentanyl and other drug categories, the combination of fentanyl and cocaine was involved in the highest percentage of deaths among all age groups followed by the combination of fentanyl and psychostimulants.

Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanyl). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to code T40.2. Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category. Other age groups are not presented due to small numbers.

2022-2023 Drug Involvement Summary: Age

Table 5. Number of Unintentional Drug Overdose Deaths Involving Select Drugs by Age, Ohio, 2022-2023

Fentanyl includes fentanyl and fentanyl analogs (e.g., carfentanyl). Psychostimulants include methamphetamine and other psychostimulants with potential for abuse (ICD-10 code T43.6). Natural and semi-synthetic opioids (e.g., oxycodone, hydrocodone) correspond to ICD-10 code T40.2. Multiple drugs are usually involved in overdose deaths. Individual deaths may be reported in more than one category. Other age groups are not presented due to small numbers.

*Total includes all unintentional drug overdose deaths among Ohio residents.

This data reflects updated national standards used in the creation of race categories. Caution should be used when comparing data to that of previous reports using a different methodology to categorize race. Other race and ethnicity groups are not presented due to small numbers.

1. The death rates presented for age groups are age-specific. The death rates presented for sex and race/ethnicity are age-adjusted to the 2000 U.S. standard population to allow a comparison of the overall risk of dying between different populations. Rates are suppressed when there are fewer than 10 total deaths.

2. Total includes all unintentional drug overdose deaths among Ohio residents.

Demographics: County

Note:

Coroners have up to six months to complete death investigations. Due to reporting timelines and the processing of Ohio mortality records by ODH Bureau of Vital Statistics and the Centers for Disease Control and Prevention's National Center for Health Statistics, Ohio mortality data for 2023 was finalized Sept. 30, 2024.
